Assignment 2

**Lyrics**

# Assignment 2: Lyrics

---

## Overview

Write a stylesheet to make a lyrics page that matches the style shown.

## Directions

Download the assignment package which includes an HTML file and image for a lyrics page. The package also includes a PDF showing a styled version of the same page. Create a stylesheet that changes the given page to match the style shown in the PDF.

You can write the style either as an internal stylesheet in the head section of the HTML file, or as an external stylesheet that the HTML file links. You can make other minor changes to the HTML file if needed, but note that no major changes are needed to complete this assignment. Most of your work should be focused on writing CSS. You may add an id or class to some elements, but do not write any inline styles.

Post the completed page on your web server and submit the page on D2L along with the address of your page on your web server.

## Evaluation

This assignment will be graded for both design and functionality.

Design tasks are worth 20 marks each, but will be assigned a grade of 20, 15, 10, 5, or 0. The design component will be evaluated as follows:

	<i>20 - Excellent</i>	<i>15 - Good</i>	<i>10 - Fair</i>	<i>5 - Poor</i>
<i>Code quality</i>	Code is clear and easy to read. Style is consistent throughout and the page works in all browsers.	Code is mostly clear. A few inconsistencies in style.	Code could use some refactoring. The page looks significantly different in some browsers.	Code is very difficult to read, not at all standards compliant, or broken in a major web browser.

Functional requirements for the page are as follows:

Functionality Task	Marks
Navigation	10
Header	10
Footer	10
Content	10
Text	10
Sidebar	10
Responsive	10
Images	10
Total	80

## Bonus

Build a second page for one of your favorite songs that uses the same stylesheet (don't forget to replace the cover art photo).
